CESMEC - INTERNATIONAL
INDEPENDENT SURVEYORS

Sampling methods and procedures used by Cesmec are based upon well known, commonly accepted statistical systems. Inherent limitations to the statistical sampling introduce a degree of uncertainty on the results that can not be avoided. Therefore, 100% assurance based on statistical sampling and analysis can not be reached. This document contains the results of inspections, measurements, calibrations, assays or analysis that were performed following methods and procedures in accordance to relevant technical standards by qualified personnel belonging to Cesmec. This personnel did their best efforts to attain reliable results. Acting as a certification organization, Cesmec can not relief manufacturers, vendors or traders of their economical responsibility with regard to quality characteristics of this product that has been assayed, tested, measured or analyzed. Neither can Cesmec assume economical responsibilities on late, cargoes or others beyond those corresponding to the value of the services provided. The relevance the user confers to this document can not be other than that specifically established in the certificate. Cesmec assumes that those who employ its services, are well aware of the limitations established in this code which are considered accepted when opening the work order. The present document can not be reproduced fully or partially without written authorization of Cesmec.
