Sampling methods and procedures used by Cesmec are based upon well known, commonly accepted statistical systems. Inherent limitations to the statistical sampling introduce a degree of uncertainty on the results that cannot be avoided. Therefore, 100% assurance based on statistical sampling and analysis can not be reached. This document contains the results of inspections, measurements, calculations, assays or analysis that were performed following methods and procedures in accordance to relevant technical standards by qualified personnel belonging to Cesmec. This personnel did their best efforts to obtain reliable results. Acting as a certification organization, Cesmec cannot hold manufacturers, vendors or traders of their economic responsibility with regard to quality characteristics of the product that has been assayed, tested, measured or analyzed. Neither can Cesmec assume economic responsibilities on late, cargoes or others beyond those corresponding to the value of the services provided. The reference the user confers to this document can not be other than that specifically established in the certificate. Cesmec assures that those who employ its services, are well aware of the limitations established in this text which are contained at the top when opening the work order. This present document can not be reproduced fully or partially without written authorization of Cesmec.
